

**STANDARD**

Most commonly used corner detail and usually associated with the standard 1 1/4" overhang.

**EASED**

Used in conjunction with eased and flat edge details. Actual radius may vary due to hardness of stone. Typically used with smaller overhangs but can still be used with standard 1 1/4" overhangs.

**4" RADIUS**

Most commonly used at upper servers and islands with the larger "knee space" style overhangs. The larger radius allows for more comfortable passageway.
